Installation

DecraMold installs the same as regular moulding. Install piece by piece, working around the room. Leave nail heads exposed to allow for any repositioning. Nail in the curved or cove of the moulding to better hide the nail holes and avoid nailing the last two to three inches of each piece.

Finishing

Staining or painting the moulding before installation is recommended. Fill any holes, scratches, dents, and gouges by lightly sanding the area with extra fine sandpaper and then fill with non-shrinking filler. Allow the area to dry and lightly sand to remove any rough spots. Painting is recommended for moulding surfaces already coated with a primer. Two finish coats will enhance durability and appearance. Mouldings with a pronounced wood grain are fit to stain or varnish.
